Used Toyota Parts

Our recycled auto parts are responsibly cleaned, checked and tested. Safe and fit for vehicle repairs purposes. Quality recycled auto parts made to manufacturer specification. Toyrolla's spare parts prices are very competitive and can offer as much as 50% savings on comparable new auto parts, creating value for our customers. Quality recycled vehicle parts (also known as used or second-hand) are an important, viable, affordable, low-cost alternative for motor repairers, mechanics, body shops, traders, insurers, and the general public. Our increased recycle auto parts availability helps reduce repair delays - Toyrolla's recycled auto parts inventory is large and can be readily accessed. We can assist with parts for older vehicles; parts no longer available new; or parts not currently available from new parts dealers (commonly known as 'stock outs') which result in parts supply and repair delays.

Our auto parts come with warranty and extended warranty programs, subject to purchase. You can expect quality recycled auto parts to come with a minimum warranty, often up to 6 months, with parts and labour warranty (unless otherwise agreed).

Our experienced staff have a good knowledge of the responsible re-use of quality auto parts and provide professional 'dealer style' customer service. Our computerised vehicle and recycled auto parts management system ensure our staff can give you prompt service for 'price and availability' inquiries, as well as provide you with commonly requested information. In the event a part is not fit for purpose, you can expect it to be exchanged for another part. In the event of the part not being able to be exchanged, you will be refunded (subject to the agreed terms and conditions during purchase).

Re-use of our quality auto parts reduces the need for new vehicle parts to be manufactured; which in turn reduces pollution and the demands on natural resources, ultimately protecting the environment for the future. Parts Re-use is an environmentally friendly and environmentally sustainable program. Automotive dismantling is a world wide industry which responsibly processes millions of End-of-Life Vehicles (ELVs) per annum, de-polluting contaminants and hazards such as the oils, fuels, batteries, gases and air bags. As a leading auto parts recycler we play an essential role in the Australian automotive industry by re-using parts and preparing ELVs for material recycling by metal shredder operators. Auto Parts Recycling therefore plays a key role in fulfilling motor manufacturer recycling "Extended Producer Responsibility" obligations in Australia.

Responsible re-use of quality auto parts simply makes common sense. The systematic recording of late model damaged vehicles in compliance with Regulations assists police in the identification of stolen vehicles, advises government authorities of Statutory Written Off Vehicles, creating legitimate employment opportunities for Australian workers and contributes to raising of state and federal government taxes.

We are a quality auto parts recycler and are committed to being the best parts professionals you

can trust and rely on for quality recycled auto parts. Buy quality recycled auto parts with confidence.
